Dear Informatics and TESDA,

I sincerely apologize for my absences.

I hold myself fully accountable for my actions.

I am here to say the reason for my absences and ask for forgiveness.

For the past months I was mostly at home, self learning. Trying to become a better person.

Striving to become professional and contribute to the society and help my family, as well as bootstrap my startup whose goal is to create a meaningful impact to the society and the rest of us.

I worked hard to study and for some time. I was also able to earn money from helping clients from another country with their request.

In the past months, I was able to achieve milestones for my future startup, career and lifelong passion for learning.

I was hooked to the abundance of excellent materials and teaching styles I found online. That I fully put my time and energy into it. Forgetting that I also have commitment for my school.

With that said, I wanted to give my dearest apology to my school and TESDA. I would do all that I can to show my commitment and apologies because I never wanted to be abandoned by TESDA, I don't want to get dropped nor let anyone down.

In contrast, I would like to express my gratitude for the program and education that tesda has given me to show how much I value being a student with TESDA as well as the importance for me hereof.

Starting from the beginning when I found out about tesda .

I took a data analyst course from Northridge. From which I got friends and supporters. I felt an unforgettable connection with the instructor sir Roy dizon.

When I was still building my startup (Evently). He was fascinated, he asked me a lot of questions and he grew more and more interested as I told him my milestones for the app. We bonded over something I have built and our passion for technology and how far we can leverage its power.

Through a program I found with tesda. I knew I have found myself a lifelong friend and mentor. All thanks to tesda.

Some time has passed and I was able to push my app to production - the app and idea that I was showing to sir Dizon.

I found out about Informatics.

I signed up keenly on their diploma in computer science for multiple reasons.

After going to a class. I thought I was incompetent. Some people in school are so ahead of me in programming.

My startup app was initially mostly programmed with strong AI assistance.

The thought of being surrounded by people keen to learn programming and people who are already hands on with it terrifies me.

I wanted to become competent.

As a result I wanted courses that I could do at my own pace so I wouldn't have to wait for my teacher to discuss in case I wanted to move forward earlier than our lessons.

I know it's improper, I know it's unreasonable because I signed a commitment letter. Please accept my apologies.

Being a student of my school was so important to me because it allows me to stay and be competent but also gives me an environment of eager students and great teachers.

For reference I would attach some of the things I did and was able to achieve through the past months self studying and such, many of which wouldn't have been possible without enrolling to Informatics:

(The links leads to identical source)

To close this letter, I am again sincerely sorry for neglecting my classes and responsibilities as a student. If given another chance, I am willing to comply with the program requirements and prove my commitment moving forward.

Warm Regards,

Louie Jay Viernes Yutuc
